feel and responsiveness imbues
both confidence and a great
putting stroke.

A center-shafted model is also
available. The suggested retail price is
\$200.

Shafts

Stulz Nanno Arrow Shafts

Stulz's booth was a beehive of activity
throughout the Show, probably
because the Stulz Nanno Arrow shafts
are already causing quite a "buzz" on
the PGA Tour and also because of their
three-edge spine design.

Nanno tubes are the strongest
microscopic structure known to man
and employed for use in space. Once
again, the golf industry has benefited
from space exploration discoveries.

The Nano Arrow shafts employ a
patented mid-shaft triangular shape
that results in a better diffusion of load
and energy transfer. The use of nano
manufacturing technology has
eliminated the possibility of flaws, air
pockets or voids in the shaft.

What this all means is that not only
does this shaft eliminate spinning or
frequency matching, but its three-
edge spine design offers tighter shot
dispersion, a significant reduction in
torques and most definitely, more
consistency and uniformity with every
shaft.

The Nano Arrow is available in five
models for woods (Nano Arrow 50,

Nano Arrow 65, Nano Arrow 80, Nano Arrow 90 and Nano Arrow 100), offering varying torque, flex and launch angle. The Nano Arrow Iron Series is available in three different flexes, and the Nano Arrow Hybrid Series is available in five different flexes.

Expect nanno shafts to be the shaft of the future and every shaft manufacturer is rushing to bring their version to market, including Aldila and True Temper.

MSRP for the Nano Arrow is \$299 for the wood series, \$160 for the hybrid series and \$120 for the iron series. www.stulzgolf.com

Iron-Wood

One of the golf industry's rising stars for the past few years has been the Chicago based Tour Edge Golf company. Known for introducing innovative technology, quality clubs at reasonable prices, they struck again at the Show with their new Exotics Iron-Wood.

Following their initial success with their Exotics fairways woods and drivers, the new Exotics Iron-Wood is the first .83 maximum COR Iron-Wood available that features the "hot launch" associated with drivers. Tour Edge has melded perfectly high COR

distance-producing design concepts with a low profile, a low center of gravity and variable-weight design elements. All combined, plus the ease-of-use, enable the Iron-Wood to produce long distances with great control.

Each Iron-Wood comes with two 6-gram weight screws and an optional weight kit with four additional screws that can be deployed in pairs to balance the club to your own individual swing. (A proprietary wrench with a 2, 4, 8, and 10 gram weight is included in the kit).

The response from those testing the Iron-Wood both at the media event and at the Demo Day was overwhelmingly favorable to the whole line of Exotics but mostly towards this Iron-wood.

As for the all important shaft, the Iron-Wood, offers the Fujikura Exotics 75 graphite shaft, the Aldila 90 Hybrid graphite shaft or the Nippon GH 950 steel shaft.

Available in 2 (18°) 3 (21°) 4 (24°) lofts. MSRP \$199.99
